Setting Compatibility View in Internet Explorer 9 & 10

Internet Explorer 9 and 10 may have some issues when accessing the Angel server. These problems can be resolved by managing the “Compatibility View” settings in Internet Explorer.

In the browser Menu bar, select Tools. If you do not see the Browser Menu Bar, right click in an unused space at the top of your browser and select the Menu bar.

In the Menu bar under Tools you will see links to the “Compatibility View settings.”

In the dialogue box that appears, add mdc.edu to the Add this website: box.
